

Owley

omoloney@fordham.edu | (917) 681-2295 | Floral Park, NY | [Portfolio](#) | [GitHub](#)

Software Engineer with hands-on experience delivering full-stack solutions and scalable backend systems. Built a Java-based void-detection estimating tool that eliminated 50+ hours of manual work quarterly and an AI-powered personal assistant integrating Twilio, Google Calendar, Grok AI, and Stripe/Plaid APIs. Experienced in microservices architecture, OAuth 2.0 flows, cloud deployments, and CI/CD pipelines.

NEW

gung : JavaScript, TypeScript, Java, Python, SQL, C++, Go, HTML/CSS
react: React, Vue.js
knowledge: Node.js, Express.js, REST API Design, Microservices Architecture, Supabase, MongoDB, Firebase Firestore
frameworks / **tools** : AWS, Docker, Git/GitHub, CI/CD Pipeline, Cursor, Claude Code, Supabase Edge Functions, Postman
Authentication & Security: OAuth 2.0 (incl. PKCE), Firebase Auth, Role-Based Access Control (RBAC), JWT
skills : Object-Oriented Programming, Data Structures & Algorithms, System Design, Distributed Systems, Agile Methodologies

ABOUT

Education : Fordham University, Major GPA: 3.5
Location : New York City, NY
Timeline : 2020 - 2024

ABOUT

Project : Spring Boot microservice with JPA/H2 persistence, external REST API integration, and Maven-verified transaction processing
Timeline : July 7, 2024

ABOUT

Project : Resume-to-job matching system in Python using TF-IDF vectorization, Naive Bayes category classification, and cosine similarity ranking to shortlist candidates for job postings.
Timeline : 2023 - 2024

ABOUT

Project : Full-stack AI-powered personal assistant in 5 months, integrating Twilio SMS, Google Calendar OAuth, Grok AI, and Stripe, enabling users to manage personal info from a single web app and iMessage
Timeline : 2023 - 2024
Skills :

- Built a full-stack AI-powered personal assistant in 5 months, integrating Twilio SMS, Google Calendar OAuth, Grok AI, and Stripe, enabling users to manage personal info from a single web app and iMessage
- Designed and deployed backend services using a microservices architecture with Supabase Edge Functions, reducing typing latency to under 100ms and response time to under 450ms.
- Implemented OAuth 2.0 authentication flows and built CI/CD pipelines for automated cloud deployment, shortening release cycles and strengthening platform security, for a production-ready interface and backend.

Project : Java Swing estimating app for calibrated floor-plan takeoffs (rooms, obstacle/void subtraction, waste and pricing), reducing 50+ hours of manual takeoff per quarter.
Timeline : 2023 - 2024
Skills :

- Built and maintained a Java Swing estimating app for calibrated floor-plan takeoffs (rooms, obstacle/void subtraction, waste and pricing), reducing 50+ hours of manual takeoff per quarter.
- Packaged cross-platform releases with a shaded fat JAR and jpackage installers (macOS/Windows), published via GitHub Actions for non-technical self-service install.

ABOUT

Project : Secure authentication system using Firebase Auth and role-based access control in 4 weeks, supporting admin and user permission tiers across the platform.
Timeline : 2023 - 2024
Skills :

- Built and shipped a secure authentication system using Firebase Auth and role-based access control in 4 weeks, supporting admin and user permission tiers across the platform.
- Built and maintained RESTful APIs (Node.js/Express) powering 18 full-stack features end-to-end, from database schema to UI, with unit tests across frontend and backend services.

Project : 8 applied backend training projects covering object-oriented programming, data structures, and system design in Java.
Timeline : 2024 - August 2024
